

FMS Sequencer 3 sec

Art.Nr.: PA-FMS FMSSEQ3S

FMS Sequencer-3 sec

Sequencer is a time system used to control RC airplane door and landing gear working in the proper order. Different sequencer has different effect. We have three different sequencers now. They are for different airplanes.

FMS Sequencer-3 sec

This latency effect is 3 sec. It means that the wheel door would close in 3 sec. Therefore, the sequencer needs corresponding el retract which must play in less than 3 sec, or the wheel door shall close before landing gear back in the tank. At present, the Sequencer-3 sec could be used at the following airplanes:

**1400MM ZERO, 1400MM T-28, 1400MM P-38, 1400MM B-25,
1400MM CORSAIR, 1400MM F6F.**

All the above airplanes use PZ retract which could function shortly (not more than 3 sec) Warning: Please make sure that your retract works in less than 3 seconds before purchasing this sequencer.

Collocations Recommend:

Sequencer-3 sec + PZ retract-3 sec
