

VOLANTEX TRAINSTAR MINI 3CH 400MM BRUSHED incl. GYRO - EPP - RTF

Art.Nr.: V761-1

Small size and a convenient carry box make the Mini Trainstar from Volantex the perfect companion for some lunchtime fun in the park. What's more with it's built-in gyro stabilizer unit with auto level function, it is literally perfect for all abilities. This gyro features an automatic leveling system that continually adjusts the control surfaces so that the plane is easy to control, preventing it from flipping, rolling or inverting by mistake while increasing overall stability. The gyro has three workings modes: beginner (full assist), mid (some assist) and expert (gyro off-full manual).

Everything is pre-assembled with foam pieces glued and pushrods connected right from the box. All that is required is 4 x AA batteries for the TX, the landing gear wire to be clipped into place and the 1S battery to be charged.

The Mini Trainstar's light weight will keep it from being damaged heavily in the event of a crash, but you do get a spare prop just in case! With three modes of gyro stabilization to select to suit your skill level the Mini Trainstar is a great choice for anyone who wants to try their hand at flying an R/C Model.
