

Topmodel CZ Kulbutin Elektro Red Dragon ARF - 1820mm

Art.Nr.: 02013EARF

Revolutionary Electric 3D Sailplane!

An exclusive new mechanism provides elevation control by rotating the complete stabilizer assembly over nearly 180.

Again, Topmodel innovates with the world's first electric 3D sailplane!

Imagine what you would like to do:

rocket up into the skies, then perform a classical aerobatic routine with perfect tight figures; then you can switch the elevators to full throw and spellbind the crowds with wild 3D aerobatics such as the "Kulbuto" plunge or the "Parkinson" loop. Figures that only you can do!

Then to finish off in style you land at very slow speed and at your feet to the applause of the watching crowd.

Don't dream, all this is possible with the Electro Kulbutin!

Technical specification:

							
1820 mm	1350 mm	2,5 kg	40 dm ²	62,5 g/dm ²	RITZ 1- 30-10	4 el. motor	Channel,4 Servos

Power train:

Motor: zbsp. HACKER B50-12S + 6,7:1

Prop: AERONAUT CAM-CARBON 1711

Cells: Lipo 4S 4000mah

ESC: JETI Jes 70 3PO

Key features:
