

VA-Model Infinity 1000 1000mm EPP rot

Art.Nr.: VA-Infiniti

Full 3D acrobatic special that will satisfy even the most demanding pilots!

The model is comprehensively reinforced with carbon and for this reason can handle even really extreme acrobatic figures. If you fit the model with 4S LiPol, you will be amazed !! Infinity chassis is masive and demountable also. The aircraft is very stable even at low flight speeds, holds as nailed in all aerobatic figures and the overall impression is balanced for the pilots who piloted the model.

We would recommend Infiniti to all pilots who have at least basic experience in controlling of RC model with ailerons.

We recommend using an engine with a thrust of over 500g (approx. 190W, 900-1150rpm / V) which also ensures sufficient re-motorization of the model for dynamic expression or ascending flight. Always choose the propellers according to the recommendations of the engine manufacturer. The double-sided attractive print of the wing, fuselage and all rudders makes model very attractive!

Wingspan	1010 mm
Length	1070 mm
Weight	450-550 g (dep.on the RC equipments)
Servos	4
Material	EPP
Functions	Rudder, Elevator, Ailerons, Motor
Level	ARF

Empfohlenes Zubehr:

Brushless motor	170-220W, 900-1200ot/V
Propeller (by the engine)	104.7"SF, 105", 114.7"SF
ESC	25-35A (min.3A BEC)
Servos	4x microservos (thrust +-2,5kg)

Battery

Lipol 3-4S, 900 – 1500mAh

Adhesives

CA + activator, LA

PREIS:

75,25 EUR

inkl. 19 % MwSt. zzgl. **Versandkosten**
