
RC-Factory Piper SC - Red - 1150 mm

Art.Nr.: B25

The Piper SC was designed by Jan Sedlacek, the world champion in pylon racing, as a multifunctional aircraft for every more or less experienced pilot.

The construction is in standard EPP thickness, so the Piper is durable and almost unbreakable. The model is calm and stable in the air, yet for first launches, choose a windless model.

The easily removable wing makes transport easy even when travelling for example on holiday. The Piper SC comes with a carbon landing gear, so you can practice take-offs and landings from the ground. Due to the large wheels, you can even take off from mown grass. Take-offs and landings should always be made into the wind, as the airspeed relative to the ground will be reduced and you will therefore need less space for take-off and landing. Avoid flying near high tension wires and always remember that even with such a simple model, damage to property or health can easily occur.

We offer tuning kits for the Piper, both additional flaps and floats! Feel free to take a look and try it out!

Hauptmerkmale

- Wingspan: 1150 mm
- Length: 850 mm
- AUW: 380 g
- Empf. Motor: 2206
- Empf. Regulator: 15A
- Empf. Servos: 4 x 10g
- Empf. Akku Battery: 600 3S, 600 2S (25C)
- Empf. Propeller: 8x4.1

Inhalt

Complete kit with fully carbon landing gear, without electronic

PREIS:

79,90 EUR
