

RC-Factory The Witch - die Hexe Bausatz

Art.Nr.: RCF-007

We've already had so much fun and joy at all the parties or events for kids with our self-made witches and now we've decided to share our magical witch with you. The simple and durable EPP construction, reinforced with spruce beams makes this model buildable in one evening. You only need two small servos, a lightweight 2s Lipo electric power combo - we recommend the 1806, but we believe the broom can be powered by any other motor with similar specs you have in your drawer at home.

The lift is created by the large hat, the sufficiently massive tail surfaces also give the Witch great flight characteristics - easy to handle with a very calm flight characteristic.

We believe that the witch will give you a lot of joy in your hands!
abrakadabra....

Hauptmerkmale

- Spannweite: 590mm
- Länge: 900mm
- Gewicht: 210-220g
- Motor: 1806
- ESC: 15A
