

RC-Factory Giles 202 American Blue FlexFoam 875mm

Art.Nr.: S101

Giles 202 - A New Era in Model Aircraft Design

The Giles 202 is the first model in the **FlexFoam Series**, introducing a completely new approach to materials and construction. At first glance, **FlexFoam** resembles Depron, but its characteristics are far superior — it's significantly tougher and more durable. The smooth surface allows for **much deeper and more vivid printing** compared to traditional EPP, although the material is approximately **20% heavier**.

The model is **extremely robust** and feels solid in the hand. However, unlike EPP kits, building the Giles is **not as straightforward**, so we **don't recommend it for complete beginners**. For assembling the main parts, we strongly suggest using **UHU Por**, as it bonds much better to the smooth surface than CA glue. On the other hand, **carbon reinforcements** should be installed using CA glue for maximum strength.

The entire structure is made from **3mm FlexFoam** and reinforced with carbon spars. Thanks to its signature **swept wings**, the Giles delivers **exceptionally stable flight characteristics**, even in windy conditions, while maintaining a high degree of agility and responsiveness.

The Giles 202 is the perfect choice for more experienced pilots seeking a combination of **great looks, durability, and outstanding flight performance**.

Hauptmerkmale

- Wingspan: 875mm
- Length: 915mm
- AUW: 180g
- Power combo: **2206 2300kv** + 15A regulator + 8x4.1 APC
- Battery: 2s 450-600mAh

Inhalt

- Kit including landing gear and hardware , without equipment set

PREIS:

72,99 EUR

inkl. 19 % MwSt. zzgl. **Versandkosten**
