

## Aviator R/C EP Trainer 120cm Balsa Kit Holzbausatz

---

**Art.Nr.:** DPRRC010

**A quick-build, easy to fly, ARTF four-channel basic trainer for 3S electric power systems.**

The best grassroots training aircraft is one that's gentle, sedate and forgiving, and that is exactly why the DPR Aviator is the perfect introduction to the hobby. Spanning 1200mm for a 3S 1000-1300mah lipo powertrain, it ticks all the crucial boxes that beginners need to consider, not least speed of assembly, ease of transport and the aforementioned flying characteristics. With beautifully pre-built and covered airframe components, final assembly can be measured in hours rather than days. Meanwhile, banded wings not only assist storage and transportation, they're designed to 'give a little' when inevitable 'arrivals' occur during the training process. Where flying is concerned, we'd like to think of the piloting process as being more akin to gentle control intervention than the constant attention that less suitable training aircraft often require. In this respect the Aviator engenders a relaxed atmosphere to training, one that will see your ability and confidence grow exponentially. Suitable for small-field flying, beginners of every kind and even old hands who want something relaxing to campaign on calm days, the DPR Aviator is just the ticket.

**Features:**

- Lightweight balsa and plywood construction
- High quality laser-cut parts
- Pre-profiled control surfaces
- Docile flying characteristics
- Easy and satisfying to build
- Damage-limiting banded wing
- Full four-channel control
- High-lift Clark-Y wing section
- Full-size plan included

**In the box:**

- 1x Laser-cut balsa parts set
- 1x Strip wood bundle for spars and longerons

- 1x Hardware pack (horns, hinges etc.)
- 1x Piano wire undercarriage and wheel set
- 1x Wing band pack
- 1x Decal sheet
- 1x Sandpaper sheet
- 1x Full-size plan
- 1x Comprehensive step-by-step instruction manual

### Specs:

- Channels: 4
- Shipping Weight: 0.93kg
- Length: 810mm
- Wingspan: 1200mm
- Wing Area: 22dm<sup>2</sup>
- Completion Level: Kit
- Experience Level: Beginner
- Preparation Time: 6-10 Hours (depending on experience)
- Assembly Time: N/A
- Recommended Usage Environment: Designated R/C model flying site
- Colour: N/A
- Material: Wood

### Additional Parts Required:

- 2208 / 2212-1000KV Brushless Motor
- 3S 1000-1300mah LiPo
- 8x5 or 8x6 Electric Prop
- 4x Micro servo
- 15/30Amp ESC
- Glue
- Covering Film
- Heat Sealing Iron
