

Aviator R/C EP Trainer 120cm Balsa ARF (w/o electronics)

Art.Nr.: DPRRC011

A quick-build, easy to fly, ARTF four-channel basic trainer for 3S electric power systems.

The best grassroots training aircraft is one that's gentle, sedate and forgiving, and that is exactly why the DPR Aviator is the perfect introduction to the hobby. Spanning 1200mm for a 3S 1000-1300mah lipo powertrain, it ticks all the crucial boxes that beginners need to consider, not least speed of assembly, ease of transport and the aforementioned flying characteristics. With beautifully pre-built and covered airframe components, final assembly can be measured in hours rather than days. Meanwhile, banded wings not only assist storage and transportation, they're designed to 'give a little' when inevitable 'arrivals' occur during the training process. Where flying is concerned, we'd like to think of the piloting process as being more akin to gentle control intervention than the constant attention that less suitable training aircraft often require. In this respect the Aviator engenders a relaxed atmosphere to training, one that will see your ability and confidence grow exponentially. Suitable for small-field flying, beginners of every kind and even old hands who want something relaxing to campaign on calm days, the DPR Aviator is just the ticket.

Features:

- 85% Pre-finished airframe
- Lightweight balsa & ply construction
- Beautifully covered in an attractive colour scheme
- Docile flying characteristics
- Damage-limiting banded wing
- Full four-channel control
- High lift Clark-Y wing section
- Perfect for raw beginners

In the box:

- 1x Pre-built & covered fuselage
- 1x Pre-built & covered 2-piece wing set
- 1x Pre-built & covered tailplane

- 1x Pre-built & covered fin
- 1x Hardware pack (horns, hinges etc.)
- 1x Piano wire undercarriage and wheel set
- 1x Main spar & wing dowel pack
- 1x Wing band pack
- 1x Comprehensive step-by-step instruction manual

Specs:

- Channels: 4
- Weight: 1030g
- Length: 810mm
- Wingspan: 1200mm
- Wing Area: 22dm²
- Completion Level: Kit
- Experience Level: Beginner
- Preparation Time: 6-10 Hours (depending on experience)
- Recommended Usage Environment: Designated R/C model flying site
- Colour: White + Green
- Material: Wood

Additional Parts Required:

- 4 Channel Radio
- 2212-1000KV Brushless Motor
- 3S 1000-1300mah LiPo
- 8x5 or 8x6 Electric Prop
- 4x Micro servo
- 15-30Amp ESC
- Glue
