

RC-Factory Yak 55 Indoor 855mm Red

Art.Nr.: S50

We present the new indoor Yak 55 made from durable 4 mm EPP, developed in cooperation with multiple world champion Gernot Bruckmann and our team pilot Jan Votava. Both belong to the world's elite in precision aerobatics and freestyle flying, and their experience directly shaped the construction and flight characteristics of this model. The Yak 55 comes in two distinctive designs – the red “Warrior” by Jan Votava and the iconic yellow-red scheme of Gernot Bruckmann.

The new Yak 55 combines the best of precision aerobatics and 3D freestyle flying. Pilots consistently confirm that the model “flies like it’s on rails” – it is exceptionally precise, stable, and highly agile at the same time. Thanks to its low wing loading, it offers excellent stability even at low speeds, which is appreciated not only by experienced competition pilots but also by less advanced fliers. With smaller control surface deflections, the Yak 55 behaves predictably, is easy to read in the air, and forgives mistakes, while advanced pilots can unlock the full range of its 3D capabilities.

Hauptmerkmale

- Flight characteristic: Stable and highly agile
- Wingspan: 855mm
- Length: 935mm
- AUW: 155-170g - if you use light equipment, you can build it less than 140g

Inhalt

Komplett? Stavebnice včetně všech karbonových vstuh a baterie (motor regulátor a serva nejsou součástí balení, možná přikoupit v doporučené sadě)
