

## BTR3022 Dual Redundant Empfänger Backup System incl. Lehrer/Schüler

**Art.Nr.:** BTR3022

### Function

BTR3022 is a redundant device generally used on model airplanes, under the redundant mode. it can select automatically a stronger and higher quality receiver signal as the output receiver signal from that of two receivers.

Teaching and learning mode can be realized through any switch channel of the primary transmitter to choose a receiver you want to use.

## Features

- Supply power for receiver
- Double backups for 4 signals
- Digital filtering and automatic signalroute
- Red and green LED light indicates the present working state
- Trainer mode availability
- Several signal redundant
- Compatible with PPM, PCM, 2.4Ghz receivers
- Working voltage is 6V

## Application

- Double receiver redundant system ensures system safety
- Wireless interactive teaching and learning mode
